## CONTENTS

<b>Chapter 1</b>	General Introduction	11
<b>Chapter 2</b>	Increases in central fat and decreases in peripheral fat masses are associated with accelerated arterial stiffening in healthy adults. The Amsterdam Growth and Health Longitudinal Study	21
<b>Chapter 3</b>	Endothelial dysfunction and low-grade inflammation are associated with greater arterial stiffness over a 6-year period	47
<b>Chapter 4</b>	Higher leptin-to-adiponectin ratio is associated with carotid and femoral stiffening in young adults: a 6-yr longitudinal study	71
<b>Chapter 5</b>	Associations of total and central fatness with carotid and femoral stiffness: analyses of the mediating role by adipokines, endothelial dysfunction and low-grade inflammation	93
<b>Chapter 6</b>	Development of fatness from adolescence into adulthood is adversely associated with leptin but not adiponectin levels in adulthood: a 23-year follow-up study	115
<b>Chapter 7</b>	General Discussion	131
	Summary	143
	Samenvatting	149
	Dankwoord	155
	About the author	163
